

HAL200Li

Professional Wet-Screeding completely wireless

The **HAL200Li** is a battery powered vibrating wetscreed powered by a Lievers 18V motor and battery. The machine can work approximately 30 to 40 minutes per battery and come with 2 batteries and a charger as standard. The HAL200Li is the next step in innovative machines that the gasoline and wired electric versions have proven to be in the past years. The **HAL200Li** is equipped with a lightweight aluminium floating screed profile that makes it very easy to create flat floors. By turning the operating handle, you can work both forwards and backwards, this is possible due to the advanced pitch control. The pitch control also allows for 3 handles to be linked together to create a 4,5 meter long handle. This way the machine can be used without having to stand in the concrete.

HAL200Li

Main features:

- Fully cordless concrete finishing due to 18V battery system
- Working width 2,0 meter (1,5 meter optional)
- Standard equipped with a speed controller
- Brushless 750W high efficiency motor
- Working on 5Ah battery with 30 to 40 minutes capacity each (depending on speed setting)
- Batteries interchangeable with other Lievers 18V machines
- Battery charging time in up to 75 minutes
- Standard delivered with 2 x 18V/5Ah batteries (3 battery version optional)

TYPE	DRIVE UNIT	VIBRATIONS	WEIGHT
HAL200Li	18V BLDC 750W	2500-7000 PER MIN	18 KG
HAL150Li	18V BLDC 750W	2500-7000 PER MIN	16 KG
